Best Link Strategies

Switch to VDI with Ace Cloud – Your scalable, efficient and cost-efficient partner

Best Link Strategies, a woman-oriented IT strategy and technical solutions provider in Virginia, United States has taken the onus of providing and enhancing the cyber security needs of professional organizations.

BLS is committed to providing its customers with a reliable and friendly service adding value for Cyber Security, Enterprise, IT Solutions, IT Management, Training, and Staffing augmentation services to Federal, State, Local Government, Commercial Entities, Small Businesses and Healthcare Organizations, etc.

The Challenge

Best Link Strategies was looking to train a pool of 40 students in security which can be scaled up or down depending upon the requirement with the right approach and technology. One of the major concerns apart from scalability was savings through cost reduction which can be translated into tangible cost savings.

Apart from remote training, BLS wanted to implement BYOD as well to make this security session a comprehensive success for everyone. They wanted to prove a level of compliance that exceeds industry standards- a level of solution that mitigates tight control over onboarding to help students to feel at ease.

The Solution

In search of finding the right solution with minimal budgetary vigilance and maximum output BLS relied on Ace Cloud for a virtual desktop solution that helped the organization to make sure it met all specific requirements.

In order to move quickly and minimize disruption, BLS focused on finding the right solutions that would allow the company to continue using its existing applications and easily extend those components to the company's requirement without any financial impact.

The Result

By using our fully managed solution, BLS eased the transition to shift towards a virtual desktop solution and allowed students to learn from the comfort of their remote locations. With the BLS + Ace Cloud in place, BLS quickly provided training to its students with

secure desktops accessible from any device. The company is now poised to scale with Ace Cloud to easily meet the spikes in future while maintaining the organization's commitment to its client.

With Ace Cloud, remote working fits right into your budget. This is because, you can make the most out of:

- ✓ An innovative, flexible way to work globally
- ✓ Multi-cloud approach to remote working
- ✓ Stringent zero trust security protocols to support modern workforce needs
- ✓ Fully managed desktops that save IT costs and time
- ✓ Scalable, efficiently managed service for users across continents
- ✓ Rolling data backups to prevent data loss
- ✓ Personalized user experience with custom configurations
- ✓ Multi-device compatibility for BYOD implementation

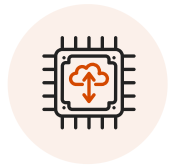

Key Benefits you Get with Our Managed Desktops

Simplified User Experience Across Devices

The Ace Cloud-enabled cloud environment provides easy access to a consistent interface from every device for a streamlined user experience. It supports Bring Your Own Device (BYOD) to ensure that a remote/hybrid workforce is productive anytime, anywhere.

On-demand Scalability for A Dedicated IT Environment

Our solution enables quick automated onboarding and seamless scalability, eliminating the need to invest in expensive hardware for changing workload requirements. Our cloud-based service comes with built-in security measures at every endpoint, providing multi-layered protection for IP and sensitive data.

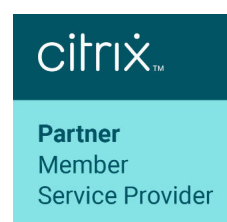

A cost-effective and flexible platform that suits every business size

With Ace Cloud-managed solutions, there is no longer need for a dedicated IT team to fix and update each desktop individually. Time and resources can instead be allocated to productive tasks, resulting in centralized control and enhanced management. Moving to our managed desktops saves additional costs on end-user hardware and on-premises servers.
